An Introduction to Psychotherapy

By Sidney Tarachow, M.D.

A strikingly original and comprehensive discussion of the principles, problems, and practice of psychotherapy. The author illustrates his approach with transcripts of supervisory conferences with residents.

List price \$7.50 Member's price \$5.75

The Collected Papers of Otto Fenichel

Two volumes. 782 pages.

"With his gift for extracting the meat of a subject he has performed great feats of clarification in matters of first importance . . . Fenichel possessed the ideal ear and pen of his time." — Bertram D. Lewin, M.D.

List price \$15.00 Member's price \$9.95
Not available as free book

Psychological Stress

By Irving L. Janis

An important study of stress which places the subject within a general theoretical perspective. Utilizing his report on the psychological reactions of surgical patients, the author presents an impressive discussion of stress as a universal human experience.

List price \$7.50 Member's price \$5.95

Essays in Applied Psychoanalysis

By Ernest Jones

Lucid and fluent essays on psychoanalysis as applied to literature, social problems and anthropology. "A work which will leave a mark upon the history of psycho-analysis; it is one which no serious student of the subject can afford to neglect." — J. C. Flugel

List price \$10.00 Member's price \$7.50

The Handbook of Mental Deficiency

Edited by Norman Ellis

A wide-ranging volume of 21 articles on current research and theory in the field of mental deficiency, including chapters on brain damage and genetics. "A real contribution to our knowledge of the psychological processes in mentally subnormal persons . . ." — Herbert Birch, M.D.

List price \$14.50 Member's price \$8.95
Not available as free book

The Three Christs of Ypsilanti

By Milton Rokeach

A unique study of paranoid schizophrenia in three chronic patients — each claiming to be Christ — living together in a mental hospital. "In this book we are shown the purpose of paranoia . . . a wealth of challenging information and incisive comment."

— New York Times.

List price \$5.95 Member's price \$4.95

Systems of Psychotherapy

By Donald Ford and Hugh Urban

A comparative analysis of ten major psychotherapy systems that places each in its most illuminating conceptual framework. Documented with an extraordinary grasp of basic research and clinical theories.

List price \$10.95 Member's price \$7.50

Schools of Psychoanalytic Thought

By Ruth L. Munroe

A 670-page compendium that presents lucid, objective, comparative analysis of all major psychoanalytic schools — including those of Freud, Adler, Jung, Rank, Fromm, Horney, Sullivan.

List price \$7.50 Member's price \$5.75

The Scope of Psychoanalysis

By Franz Alexander

624-page volume presents the full sweep and breadth of Alexander's major contributions in our times . . . to psychoanalytic theory and techniques, sociology, psychosomatic medicine, social psychology.

List price \$12.50 Member's price \$7.95

Analytic Group Psychotherapy

By S. R. Slavson

The patriarch of American group therapy presents his brilliant work on the concepts, dynamics and potential in this field, including precise definitions of problem areas. "His erudition and depth are apparently inexhaustible." — Maurice Linden, M.D.

List price \$10.00 Member's price \$7.50

The Clinical Use of Dreams

By Walter Bonime

The first practical clinical handbook to base dream interpretation on interpersonal theory. Presents a major re-evaluation of the nature and role of sexuality, resistance, and "transference phenomena."

List price \$8.50 Member's price \$6.75

Dementia Praecox

By Eugen Bleuler

"A more comprehensive and a more comprehensible picture of schizophrenia than any other publication." — *Mental Hygiene*.

List price \$7.50 Member's price \$5.75

**Childhood and Society /
Insight and Responsibility**

By Erik Erikson

A newly revised edition of the classic "interpenetration of the biological, cultural and psychological" in psychoanalytic writing. Plus a new collection of wide-ranging papers which build a conceptual bridge from psychoanalytic perception of reality to historical actuality.

List price \$12.00 Member's price \$8.95

My Language is Me

By Beulah Parker

Illustrated with verbatim interviews from the treatment of a profoundly disturbed adolescent, here is the first full length work to set forth candidly the feelings and doubts of the therapist as well as the patient.

List price \$8.50 Member's price \$5.95

Essays on Ego Psychology

By Heinz Hartmann

Hartmann's indispensable and influential papers on psychoanalytic theory, brought together in one major volume.

List price \$10.00 Member's price \$7.95

Psychodynamics of Family Life

By Nathan W. Ackerman, M.D.

Diagnosis and treatment of disturbed family relationships. "A mature, carefully thought out work that stems from years of experience." — Don D. Jackson, M.D.

List price \$6.75 Member's price \$5.50

Interpretation of Schizophrenia

By Silvano Arieti

Revised fifth printing of the noted work on the etiology, psychodynamics and treatment of schizophrenia.

List price \$8.50 Member's price \$6.75

The Psychoanalytic Study of The Child

Major new contributions to psychoanalytic theory, normal and pathological child development, and latest clinical research findings. Eissler, Hartmann, Sandler, A. Freud and E. Kris are among the 29 contributors.

Vol. XVII (1962 Edition)

List price \$8.50 Member's price \$5.95

Volume XVIII (1963 Edition)

List price \$10.00 Member's price \$6.95

Principles of Psychoanalysis

By Herman Nunberg

Foreword by Sigmund Freud

A translation of the fundamental work that Freud called "the most complete and accurate presentation we have at this time of a psychoanalytic theory of neurotic processes."

List price \$7.50 Member's price \$5.75

Being-In-The-World

By Ludwig Binswanger

The major writings of the father of existential psychiatry, available in English for the first time. With illuminating commentary by Dr. Jacob Needleman on Binswanger's ideas and influence.

List price \$10.00 Member's price \$7.50

Magic, Faith, and Healing

Edited by Ari Kiev

Fascinating accounts of illness and healing in nonindustrialized societies that serve to illuminate the social aspects of psychoses and treatment of mental illness in the industrialized West.

List price \$6.95 Member's price \$5.50

Psychoanalysis and Daseinsanalysis

By Medard Boss

A major re-evaluation of psychoanalytic therapy in terms of contemporary Swiss-German views—latest Daseinsanalytic theory (based on Heidegger's philosophy), case reports, technical comments.

List price \$8.50 Member's price \$6.75

Etiology of Schizophrenia

Edited by Don D. Jackson

A penetrating cross-section of inter-disciplinary reports—by 17 social and behavioral scientists—on the origin and causes of schizophrenia. Includes psychoanalytical, biochemical, sociological aspects.

List price \$8.50 Member's price \$6.50

Development of the Perceptual World

By Charles Solley & Gardner Murphy

A consideration of three important aspects of perception: its nature, the learning mechanisms involved, and the theoretical relationship between perception and learning mechanisms.

List price \$7.50

Member's price \$5.95

The Behavioral Basis of Perception

By James G. Taylor

Professor Taylor constructs a bold and original theory of perception, supporting his position with a variety of interesting experiments and observations.

List price \$8.50

Member's price \$5.95

Expression of the Emotions in Man

Edited by Peter Knapp

An important contribution to the development of an integrated, unified understanding of emotional phenomena. Focuses on the expressive manifestations of emotions in the human adult which tend to be associated with physiological processes and subjective states.

List price \$7.50

Member's price \$5.95

Psychological Issues

By Erik H. Erikson et al.

A new, one-volume edition of four brilliant monographs in a pioneering series — including Erikson, Heider, Klein, Spence — that is designed to effect a mutually fruitful merging of psychology and psychoanalysis.

List price \$12.00

Member's price \$8.95

Comparative Psychology of Mental Development

By Heinz Werner

The late Heinz Werner's *magnum opus* and perhaps the single most important attempt to apply the insights of ego psychology. Through study of child mentality, of the primitive and of the psychotic, he presents a brilliant account of the development of mental processes.

List price \$7.50

Member's price \$5.75

The Origin of Races

By Carleton S. Coon

Here is the first detailed theory of evolution of the five races of man — draws on extensive genetic, climatic, geographic, cultural evidence to reconstruct man's ancestral journey through space and time.

List price \$10.00

Member's price \$7.50

The Human Species

By Frederick S. Hulse

A new and authoritative introduction to physical anthropology which integrates the most up-to-date analyses, discoveries and conclusions in the field. A lucid, precise and comprehensive overview.

List price \$7.95

Member's price \$5.95

Structural Anthropology

By Claude Lévi-Strauss

The first comprehensive statement on an integrated science of man by the foremost anthropological theorist of the present day. Lévi-Strauss regards this collection as his most representative work.

List price \$10.00

Member's price \$7.50

The Greek Stones Speak / The Mute Stones Speak

A Dual Selection

By Paul MacKendrick

Copiously-illustrated companion volumes by the eminent archeological historian that re-create and revitalize ancient Roman and Greek cultures and offer insights into the nature of classical man.

List price for the set \$15.00

Member's price \$8.95

Not available as free book

And Then Came Man

By Hartmut Bastian

A fascinating account of prehistory—the four billion years before man. "Exceptionally lucid... the story of geological and biological evolution is presented in a dramatic and authoritative fashion that will satisfy most specialists and delight the general reader."

— *New York Times*

List price \$6.95

Member's price \$5.50

Behavior and Evolution

Edited by Anne Roe & G. G. Simpson

A vital collection of major writings on evolutionary facts and principles as they bear on human behavior. 25 contributors include Julian Huxley, Margaret Mead, Marston Bates and Ernst Mayr.

List price \$10.00

Member's price \$6.75

The Developmental Psychology of Jean Piaget

By John Flavell

A new and monumental study of Piaget's work, the most detailed and comprehensive over-view now available. "It is a fine book... my deepest appreciation to its author for the clear and straightforward presentation."

— Jean Piaget

List price \$8.75

Member's price \$5.95

Six Cultures: Studies of Child Rearing

Edited by Beatrice B. Whiting

An important report on child rearing practices in six different cultures and the influence of these practices on adult character. Based on a study by a task force of anthropologists and social psychologists.

List price \$12.50

Member's price \$9.95

Positive Aspects of Child Psychiatry

By Frederick H. Allen

The germinal and eclectic contributions of a pioneer in child therapy, including all his major scientific papers. Sections on basic principles, clinical applications and training in child psychiatry.

List price \$6.00

Member's price \$4.95

Creativity and Intelligence

By J. W. Getzels & P. W. Jackson

Drawn from extensive batteries of tests, the findings of the most important investigation ever made into the relationship between high creative potential and high intelligence in adolescents.

List price \$5.95

Member's price \$5.25

Child Rorschach Responses

By Ames, Learned, Metraux, Walker

From the Gesell Institute — "the most comprehensive normative data on children's Rorschach responses yet approached."

— Zygmunt A. Piotrowski

List price \$8.00

Member's price \$5.95

Prediction and Outcome

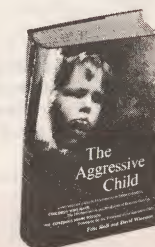

By Sibylle Escalona and Grace Moore Heider

Based on the authors' unique research project at the Menninger Foundation — new data on the degree to which personality development in childhood may be predicted from characteristics shown in infancy. "An important and creative venture in exploratory research."

— John D. Benjamin.

List price \$6.50

Member's price \$5.25

**The Aggressive Child**

By Fritz Redl & David Wineman

In one volume, *Children Who Hate and Controls from Within*. "A truly pioneering design for a laboratory for the study of ego functions in general and the problem of controls in particular."

— Joseph B. Cramer.

List price \$7.50

Member's price \$5.95

Heal the Hurt Child

By Hertha Riese

A unique and comprehensive program for treating the so-called "untreatable" child — the destitute, despairing, emotionally frozen child. "A fundamental challenge to the entire field of child welfare to re-examine its treatment philosophy."

— *Child Welfare*

List price \$10.00

Member's price \$6.75

Prevention of Mental Disorders in Children

Edited by Gerald Caplan

An imposing array of important contributions to the field of preventive psychiatry—ranging from research into biologic, psychologic and sociologic factors to medical and social treatment programs.

List price \$8.50

Member's price \$6.50

Patterns of Incest*Edited by R. E. L. Masters*

A fascinating and long-needed psychosocial study of incest, based on clinical and historical data. Valuable as a contribution to our understanding of a neglected aspect of sexual behavior.

List price \$9.50

Member's price \$6.95

**The Dogma of Christ /
The Sociology of Religion***A Dual Selection*

Trenchant new essays by Erich Fromm, one of today's most influential leaders in psychoanalysis — plus — Max Weber's major formulations on the sociology of religion.

List price for the set \$11.45

Member's price \$7.95

Small Groups*Edited by Hare, Borgatta, Bales*

Reports by 58 social scientists on research findings in small group interaction — cover social perception, communications, role differentiation, leadership; implications for psychotherapy, case work, counseling.

List price \$6.50

Member's price \$5.25

Casework: A Psychosocial Therapy*By Florence Hollis*

A milestone in the synthesis of casework theory and practice. Dr. Hollis forges a brilliant integration of techniques within a framework of Freudian concepts. Even the most seasoned caseworker will find this book invaluable.

List price \$8.50

Member's price \$5.95

Aggression*By Leonard Berkowitz*

Carries the famous Dollard-Miller Frustration-Aggression hypothesis significantly forward with major modifications. A comprehensive study of aggression based on two decades of original research.

List price \$7.95

Member's price \$5.95

Class, Status and Power*Edited by R. Bendix & S. M. Lipset*

A 725-page anthology of writings by 63 social scientists from various disciplines on social class — its relation to patterns of power, family, sex, mental illness, vertical mobility.

List price \$7.95

Member's price \$5.95

The Road to H*By Isidor Chein and Associates*

The widely-discussed and penetrating analysis of why, when and how drug addiction happens — and what should be done about treatment, prevention and control. "Reports more good research on addiction than the Federal hospitals have done in the 25 years of their existence." — Paul H. Blachly, M.D.

List price \$12.50

Member's price \$8.95

Life Stress and Mental Health*By Thomas Langner and Stanley Michael*

A meticulous analysis of big-city mental health and illness, with emphasis on the effects of socio-economic factors. An outstanding work of epidemiological research "which confirms in impressive detail what clinicians have inferred from their experience." — Karl Menninger

List price \$9.75

Member's price \$6.95

Law, Liberty and Psychiatry*By Thomas S. Szasz, M.D.*

A controversial and strikingly original inquiry into the legal and social uses and misuses of psychiatry; and a reasoned dissent from the "theory and practice of false psychiatric liberalism." "Puts the key dilemmas squarely in public view with a wealth of learning." — John P. Roche

List price \$7.50

Member's price \$5.95

History, Psychology, and Science*By E. G. Boring**Edited by Watson and Campbell*

Selected papers by the eminent psychologist dealing largely with the psychological aspects of scientific development. "A collection of essays that every psychologist will want to read and reread." — S. S. Stevens, *Harvard University*.

List price \$8.95

Member's price \$6.95

The Mental Hospital*By Alfred Stanton & Morris S. Schwartz*

"Examines the interactions of hospital patients and staff in the light of modern sociological and psychological theory . . . Highly recommended." — *Scientific American*.

List price \$8.50

Member's price \$6.75

The Psychology of Personal Constructs*By George A. Kelly*

Two volumes. Volume One: *A Theory of Personality*. Volume Two: *Clinical Diagnosis and Psychotherapy*. "A comprehensive and systematic theory of personality, a way of assessing people which springs from the theory, and some provocative implications for psychotherapy . . . An exciting event."

— Laurence F. Shaffer

List price for the set \$15.00

Member's price \$8.95

Not available as free books

By Leon H. Levy

A profound yet thoroughly clear analysis of psychological interpretation, its characteristics, principles, and its role in psychodiagnostics and psychotherapy.

List price \$7.50 Member's price \$5.75

Clinical Process

By E. Kuno Beller

Dr. Beller proposes a system for organizing clinical data in the treatment of personality disorders in children and their parents. He also presents a quantitative method for analyzing and evaluating clinical records in practice and research.

List price \$10.00 Member's price \$6.95

Essentials of Psychological Testing

By Lee J. Cronbach

A modern classic, the most up-to-date handbook on the meaning, value and use of psychological evaluation through testing. "A penetrating analysis of the topographical anatomy of mental testing."

— American Journal of Orthopsychiatry

List price \$7.50 Member's price \$5.75

Projective Techniques

Edited by H. H. & G. L. Anderson

Twenty-eight specialists and practitioners discuss 20 tests used for understanding the creatively productive personality. Includes Rorschach, free drawings, sentence completion, thematic apperception, graphology.

List price \$9.00 Member's price \$6.75

Theory and Research in Projective Techniques

By Bernard Murstein

An unusually comprehensive and highly comprehensive sourcebook on projective tests in general and, in particular, on the Thematic Apperception Test. Examines and evaluates theories and assumptions, administration, scoring, interpretation.

List price \$8.50 Member's price \$6.75

Clinical Application of Psychological Tests

By Roy Shafer

Handbook for interpreting six commonly used psychological tests — Wechsler-Bellview Intelligence Scale, Rorschach, Thematic Apperception, Sorting Test of Concept Formation, Word Association, Memory Efficiency.

List price \$6.75 Member's price \$5.25

Developments in the Rorschach Technique

Edited by Bruno Klopfer

A modern classic on scoring, administering and interpreting the Rorschach. "Presents, in an unusually well-organized, well-delineated manner, the Rorschach-Klopfer system that has... few peers and no superiors."

— Journal of Projective Techniques.

List price \$8.50 Member's price \$6.95

Rorschach Psychology

Edited by M. A. Rickers-Ovsiankina

"The first comprehensive treatise that cuts across and integrates the several schools of Rorschach scoring and interpretation... well-planned, well-edited, and well-written."

— Harold H. Anderson.

List price \$8.50 Member's price \$5.95

Concepts of Personality

Edited by Joseph Wepman and Ralph Heine

An important contribution to an over-all and productive view of basic directions in personality theory and structure. With provocative and fruitful selections by Catell, Le Vine, Erickson, Maddi, many others.

List price \$8.95 Member's price \$6.95

Psychology in The Making

Edited by Leo Postman

Outstanding psychologists analyze persistent research problems in the field: biological foundations of behavior; perception, learning, and memory; individual differences and personality.

List price \$9.00 Member's price \$6.95

The Study of Lives

Edited by Robert White

Eighteen original essays on personality, by Erikson, Holt, McClelland, White, Wyatt, etc., in a volume honoring Henry A. Murray. A sampling of the most sophisticated thinking in personality research today.

List price \$9.50 Member's price \$6.75

Personality Structure and Human Interaction

By Harry Guntrip

Through a critique of major schools of psychoanalysis—Adler, Horney, Fromm, Sullivan—Guntrip proposes a psychodynamic theory of the 'person' and personal relationships, largely based on the theories of the brilliant English psychoanalyst, Fairbairn.

List price \$7.50 Member's price \$5.75

Biological and Biochemical

Bases of Behavior

Edited by Harry Harlow and C. Woolsey

Twenty eminent authorities—including F. A. Beach, J. C. Lilly, R. W. Sperry—report recent research findings that show progress in correlating data from the behavioral and biological sciences.

List price \$8.00 Member's price \$5.95

The Analysis of Behavior

By James G. Holland & B. F. Skinner

A historic programed text which attacks the problems of psychology from a consistent and highly integrated point of view, and an extraordinarily interesting Skinnerian survey of fundamental concepts from reflex behavior to psychotherapy.

List price \$5.95 Member's price \$4.95

Drugs in Psychoanalysis and Psychotherapy

By Mortimer Ostow, M.D.

A clear and cogent picture of what drugs can and cannot do as adjuncts to therapy. Clinical examples and criteria for the use of drugs round out a truly comprehensive treatment of the subject.

List price \$8.50 Member's price \$6.75

Organization and Pathology of Thought

Edited by David Rapaport

The 786-page modern classic that brings together 27 major writings on human thought processes. Studies of consciousness, remembering, forgetting, perceiving, hallucinations, creative thinking of all kinds.

List price \$12.00 Member's price \$6.75

Drugs and Behavior

Edited by L. Uhr & J. G. Miller

695-page anthology of writings on recent progress in psychopharmacology. 63 scientists—including biochemists, neurologists, and psychiatrists—describe how drugs affect normal and pathological states.

List price \$10.95 Member's price \$6.95

Instinctive Behavior

Translated and edited by Claire H. Schiller

Thoughtful, pioneering essays outlining contemporary approaches to the nature and mechanisms of instinctive behavior.

List price \$7.50 Member's price \$5.75

A History of Experimental Psychology

By Edwin G. Boring

"The most orderly, most comprehensive, most authentic, and best documented of our historical writings." — American Journal of Psychology.

List price \$6.00 Member's price \$4.95

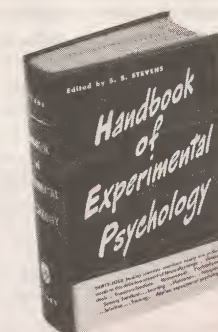

Handbook of Experimental Psychology

Three major contributions to psychoanalytic thought

Heinz Hartmann / Edith Jacobson / Jacob Arlow & Charles Brenner

A Major Contribution
able these three
plete set of vol
analytic Association

HEINZ HARTMANN

The publication of a complete English translation of the late Heinz Hartmann's **EGO PSYCHOLOGY AND THE PROBLEM OF ADAPTATION**, inaugurated the Monograph Series of the Journal of the American Psychoanalytic Association.

Ich-Psychologie und Anpassungsproblem was first presented in 1937 before the Vienna Psychoanalytic Society and then published in German in 1939 in the *Internationale Zeitschrift für Psychoanalyse und Imago*. Historically, it represents a turning point in the development of modern psychoanalytic theory. It is a natural sequel to Freud's previous formulations of the structural hypothesis and his contributions to ego psychology. With its appearance there began an evolution in psychoanalytic thought, and its full implications for theory and practice are not yet fully realized.

To those readers intimately acquainted with current psychoanalytic ego psychology, Hartmann's essay reveals the first formulations of some of its basic concepts. Many of them will have a ring of familiarity because of the remarkable degree to which Hartmann's ideas have shaped, and become assimilated into, psychoanalytic thinking. One becomes aware of the tremendous impact of these theories when finding that in this volume such concepts as the undifferentiated phase, the conflict-free ego sphere, conflict-free ego development, and primary and secondary autonomy developed for the first time.

The idea that ego defenses may simultaneously serve the control of instinctual drives and the *adaptation to the external world* finds its initial expression in **EGO PSYCHOLOGY AND THE PROBLEM OF ADAPTATION**. The implications of Hartmann's theory — many now being systematically explored—for the development of perception and thought processes, ego strength, ego weakness, and of normality, are also discussed.

In this volume, Hartmann made a systematic attempt to establish, within the framework of a psychoanalytic ego psychology, the groundwork for a theory of human behavior in general, normal as well as abnormal. The great sweep of his exceptionally rich intellect has made it possible for him, in so doing, to integrate the whole of psychoanalytic knowledge with the related fields of biology, psychology, sociology, and philosophy.

Contribution to Psychoanalytic Ego Psychology The Editors are pleased to make available important works on theoretical foundations and techniques, comprising the volumes now available in the series sponsored by the Journal of the American Psychoanalytic Association.

EDITH JACOBSON

THE SELF AND THE OBJECT WORLD investigates problems of identity—the experience of coherence, continuity and the uniqueness of self and its disturbances. Edith Jacobson approaches these problems from several fundamental planes and perspectives. In the process, she confronts clinical observation with current analytic concepts in order to present a meaningful and provocative assessment of the working tools of the analyst in terms of recent

developments in psychoanalytic theory.

By employing a multidimensional perspective, Dr. Jacobson's volume yields a richly illuminating picture of the complexities of human development. Familiar problems appear in a new light, others are presented or clarified for the first time.

The study moves first into a careful dissection of differing uses of the term, "identity", followed by a much-needed redefinition of such basic concepts as infantile narcissism, primary masochism, orality and the distinction between ego and self, object and self image.

The heart of Dr. Jacobson's study, perhaps, is her superb interweaving of the genetic and developmental experiences upon which identity is founded: the influences of the vicissitudes of identifications and object relations on evolving psychic structure. Tracing these from the early infantile period, she presents the essence of all that is currently known about instinctual elements and the development of specific ego and superego functions, the growth of affective and ideational responses, the role of the object at different stages of maturation.

Dr. Jacobson's insistence upon a new and fruitful examination of these basic concepts is combined with a dynamic comparison of normal, neurotic and psychotic phenomena which are, in turn, compared with the conditions and events at crucial stages of development. Unlike most psychoanalytic writings, the author does not stop after considering the resolution of the oedipus complex. Her investigations proceed through the latency and adolescent periods to adulthood and maturity.

THE SELF AND THE OBJECT WORLD is a highly integrated, continuously provocative enrichment of psychoanalytic theory, its clinical understanding and technical skills.

JACOB ARLOW AND CHARLES BRENNER

PSYCHOANALYTIC CONCEPTS AND THE STRUCTURAL THEORY

grew out of the observation that there are several areas of psychoanalytic theory and practice which are victims of a "cultural lag." In particular, Drs. Arlow and Brenner contend that psychoanalysis has not yet taken full advantage

of the opportunities for progress which Freud's structural theory of the psyche has to offer in the development of more effective concepts and technical skills. *"The whole of what we call ego analysis today was made possible by the introduction of the structural theory in 1923 and of its corollary, the current theory of anxiety, in 1926. It is these theories that differentiate modern psychoanalytic technique from what went before."*

Despite the nearly universal acceptance accorded the structural theory, Drs. Arlow and Brenner suggest that the full nature and extent of its implications for psychoanalytic theory and practice have not been generally appreciated. It is their conviction that the topographic and the structural theories are neither compatible nor interchangeable. They maintain that it is a serious disadvantage to use the terms of the two theories interchangeably—to speak of the id, the ego, and the superego in one breath and of the unconscious, the preconscious, and conscious in the next, a practice "which is universal."

PSYCHOANALYTIC CONCEPTS AND THE STRUCTURAL THEORY attempts to show that where the two theories do differ from each other, the structural theory is the more satisfactory of the two. It is, say Drs. Arlow and Brenner "distinctly superior to the topographic one. For this reason it has largely replaced the topographic theory often to a greater degree than has been explicitly realized. *It is we feel, the theory which psychoanalysts should apply to the understanding of all mental phenomena. "The relation between the theory of psychoanalysis and its practice" they continue, "is a particularly close one. We attempt to illustrate this at every opportunity and particularly in the chapters on dreams and on psychoses. It is precisely because the structural theory led to a revolutionary improvement in psychoanalytic practice that it is of such great importance."*

Contents

The Self and the Object World

PART I

EARLY INFANTILE, PREEOEDIPAL, AND OEDIPAL PHASES

1. Narcissism, Masochism, and the Concepts of Self and Self Representations
2. Review of Recent Literature on the Problem of Identity
3. The Fusions between Self and Object Images and the Earliest Types of Identifications
4. The Child's Discovery of His Identity and His Advance to Object Relations and Selective Identifications
5. The Child's Finding of His Sexual Identity and the Building Up of His Ego

PART II

SUPEREGO FORMATION AND THE PERIOD OF LATENCY

6. The Forestages of Superego Development
7. The Idealization of the Love Object, Ego-Ideal Formation, and the Development of Superego Identifications
8. The Organization and Integration of Different Superego Components into a Consolidated Functional System
9. Developmental Trends in the Latency Child and the Relations of Guilt to Shame and "Inferiority" Conflicts

PART III

PUBERTY AND THE PERIOD OF ADOLESCENCE

10. Puberty Changes and Their Influence on the Experience of Identity and the Relations to the Other Sex
11. The Instinctual and Emotional Conflicts of the Adolescent and the

Remodeling and Growth of His Psychic Structures

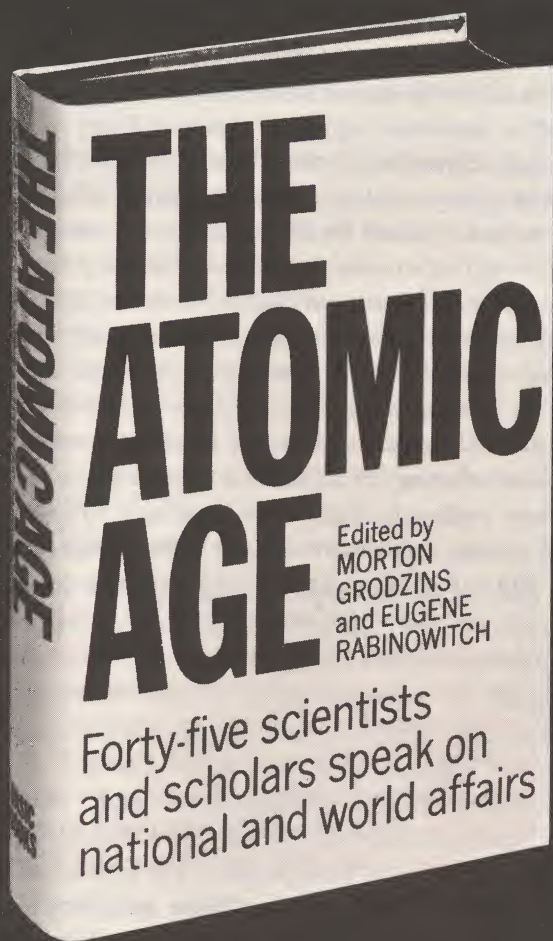

12. The Influence of Normal and Unsuccessful Adolescent Conflict Solution on Postadolescent Identity Formation and the Further Development of Personality

1. Introduction
2. The Topographic Theory
3. Freud's Criticisms of the Topographic Theory
4. The Structural Theory
5. Comparison of Two Theories
6. The Concept of Regression and the Structural Theory
7. The Primary and Secondary Processes
8. The Place of the Concepts "Preconscious" and "Unconscious" in the Structural Theory
9. Dreams and the Structural Theory
10. The Psychopathology of the Psychoses

**“An indispensable guidebook to rational judgments
when we are forced to think about the unthinkable.”**

The atomic age is marked by two aspects — the capacity of man to destroy himself and that of overcoming material wants that have stood in the way of self-fulfillment. Many of the scientists who ushered in the atomic age were aware of these consequences of their work and acknowledged their special responsibility to seek to reorient public policy so as to reduce the threat of annihilation and realize the promise of plenty for all. From the very beginning, in 1945, the *BULLETIN OF THE ATOMIC SCIENTISTS*, edited by Eugene Rabinowitch, Professor of Biophysics at the University of Illinois, played an essential part in this educational effort and recorded the expressions of leading figures in the world of science and public affairs on basic issues. In *THE ATOMIC AGE*, Morton Grodzins, Professor of Political Science at the University of Chicago, has collaborated with Eugene Rabinowitch in selecting 65 significant articles from the *BULLETIN*, grouping them under the four main headings, “Failure,” “Peril,” “Fear,” and “Hope,” and more explicit subheadings, and providing the sections with introductory notes which place the articles in historical perspective and give coherence to the book. **The result is not merely a valuable and authoritative source book on the problems and events of the atomic age, but a powerful and moving account of the efforts of brilliant and public-spirited men to deflect humanity from its drift toward self-destruction, implicit in habitual responses to new challenges. This struggle has not been won. Those who are ready to assume their proper share in it — as well as those who desire to understand the world in which they live — will find *THE ATOMIC AGE* of value.**

The heading “Failure” refers to the failure to achieve international control of atomic weapons. In this section the clear logic of the Franck report, pleading against the dropping of atomic bombs on Japanese cities for the sake of the future, contrasts with the equally cogent argument of Stimson that this action had been made inevitable by events of the past. Oppenheimer advances the Acheson-Lilienthal plan of endowing a United Nations Atomic Development Authority with a monopoly of nuclear fuel production, which is defeated primarily by Soviet distrust of the West. After this failure Urey points out that not just the atomic bomb, but modern war must be eliminated and that this is possible only with limited world government. Bertrand Russell and Teller concur and Einstein is taken roundly to task by a group of prominent Soviet scientists for a similar stand; his reply is a classic in turning away wrath with a soft answer. The first nuclear explosion in Russia

and the decision to proceed with the development of the hydrogen bomb put an end to the effort of heading off a nuclear arms race.

In the section “Peril” we encounter papers on the threats which the new weapons, biological and chemical as well as nuclear, pose to the world, and on the conduct appropriate to a situation in which we and our adversary face each other “like two scorpions in a bottle.” Proposals for general disarmament, limited deterrence, and graduated unilateral disengagement are presented. Rabinowitch’s statement, “The only proper aim of foreign policy in the atomic age is the furthering of the interests of mankind”, appears particularly pertinent. In Russell’s argument on behalf of British nuclear disarmament we find an eloquent expression of the revolt of human decency against armament policies in East and West. A final group of papers on fall-out, shelters, and the test ban tends to treat these items as matters of secondary importance in the overall issue of survival. Dyson points out, however, the negative value of truly effective shelters, which, in a nuclear war, might result in the destruction of all of mankind instead of the contestants alone.

“Fear” deals with the issues of espionage and loyalty and the relations between the state and the scientist in general. The famous atomic spy cases are examined in detail and their minor effect on history is pointed out. Grodzins examines the sources of national loyalty in a democracy and a totalitarian country. The visa procurement difficulties of Michael Polanyi, the Atomic Energy Commission Hearings of Robert Oppenheimer, and the appearance before the Internal Security Subcommittee of Linus Pauling make interesting reading illustrating shortcomings in the relationship between the scientist and the state. An encouraging note is sounded in the last section, which is largely devoted to the actualities and prospects of international cooperation. The story of the Pugwash Conferences on Science and World Affairs forms a particularly significant chapter; the fact that the deliberations of the scientists at Stowe in the fall of 1961 went on in spite of the strain imposed by the Soviet resumption of nuclear weapons tests speaks well for the increase in mutual understanding engendered at these meetings. Nor, as Rabinowitch points out in his final essay, is this improvement of mutual understanding an isolated phenomenon or one limited to scientists. The sense of common goals finds echoes even in the public statements and actions of national leaders and governments. To be sure, this does not eliminate the dangers under which we live. At best, it presents some slight hope that men, in jointly seeking to realize the promise of the atomic age, may overcome its threat.

The Family & The Sexual Revolution

a review by
Ernest van den Haag
The New School for Social Research

The merits of *THE FAMILY AND THE SEXUAL REVOLUTION* are in its “vices,” vices that are far more interesting than any virtues might have been, and that will well repay anyone who reads it – it is easy to read – particularly if he is accustomed to a more academic approach. These interesting vices, I gather, are intended (though perhaps the editor got carried away a little). In editor Edwin Schur’s words:

“This volume is intended to provide neither direct guidance on specific personal or interpersonal problems, nor a compendium of scientific information. Rather I have tried to bring together some provocative materials relating to three hotly disputed topics that lie at the center of key changes affecting the modern family – sex standards, women’s roles, and birth control.

Although I have tried to include diverse viewpoints, the volume is somewhat weighted toward unconventional views – on the assumption, again, that the conventional ones already predominate in existing works as well as constituting the outlooks which most Americans have more generally been conditioned to accept.”

Mr. Schur has admirably succeeded in what he set out to do – wherefore he presents a confusing variety of often confused views, which is highly interesting to readers concerned with what people think about sex and the family – regardless of whether the actual evidence supports their views. The book describes and well-exemplifies this confusion of standards, even of standards of discussion.

Let me indicate some of the material the reader will find. He

will discover Albert Ellis at his best – in all his marvellous and unbelievable banality. (For Ellis, Freud has never lived. He is convinced that every sexual custom can be explained by, and will yield to, common sense and rational argument. Ellis is touchingly unaware that his common sense is a series of prejudices, and his rational argument is neither.) Marion Bassett offers

a nearly complete collection of cliches on the “double standard” which alone is worth the price of the book. Paul Goodman plays Paul Goodman, quite amusingly, though one is not sure whether he means to be so funny. I think his sloppily pompous language must be part of a subtle joke he is playing on his readers. If not, education must certainly be as bad as he says it is. Let me offer

an appetizer: “The preoccupation [homosexuality] appears either as gnawing doubts that oneself might be a latent homosexual, or hostility and even paranoia. Special mention must be given to male homosexuality, which preoccupies adolescents and young men of every class from bottom to top.” (I suspect a pun, at bottom.)

There is also a symposium by many hands on “Premarital Sexual Behavior” which goes on so long that by the time the premarital readers are through with it, they must be ready for symposia on postmarital sexual behavior. Perhaps the longeur is subjective, i.e., connected with the quality of the ideas offered. At any rate, Mr. Schur could not have found a finer example of the academy at its worst – one stands back, far back, in awe.

There is finally, and not least, the ingenuous Mr. Neill busily saving the world through healthy, happy sex, and revealing to the reader that “no man with a good sex life could possibly torture an animal or torture a human, or support prisons.” Holy Jean-Jacques Freud! It’s, of course, self evident, and Greeks, Romans, African primitives, American Indians – why, they did not have a healthy sex life (though it looks suspiciously like the one advocated by Neill) or perhaps the anthropologists or historians didn’t. But then, if nobody had a happy sex life before Neill founded his school, how do we know he’s right? We ask him, silly. Anyway, enthusiasts like their data selective.

But enough sampling. If he peruses it in the right spirit, the reader of this collection will find in it material not only for a dozen treatises on progressive and unconventional superstition, but also solid information and a great deal of amusement. Can one ask for more?

**Utopiates: The
Use and Users
of LSD-25**

What is reality? Philosophers, clerics, the learned men of every era have argued this question for centuries — usually inconclusively. How is inner experience integrated with outer reality. This ancient philosophical dilemma is particularly haunting to contemporary Western man who finds in his highly technological society increased depersonalization, institutionalization and collectivity. "More and more people," says Nevitt Sanford, in his outspoken Foreword to *UTOPIATES: THE USE AND USERS OF LSD-25*, 'want out' — and this includes, strikingly enough, people who have been successful in society and have received the rewards it promised them."

Who are the users of lysergic acid diethylamide (LSD-25), the most potent mind-altering drug now known? In this striking epidemiological study, author Richard Blum isolates five distinct groups: *private psychotherapy patients; public clinic patients; laboratory subjects; the participants in former LSD "centers"*, and perhaps most significant—*members of intellectual and professional elites*—and often their students—who use LSD in their homes.

Blum's revealing data discloses that unlike the popular press image of the bearded "Pothead", his subjects expressed genuine curiosity and desire for increased self-knowledge and "enhancement." They saw in LSD, Blum notes one possible way of resolving conflict brought about by life in an external world which more and more encroached upon the inner world of private experience.

These LSD users were almost equally male and female, well educated, between 31 and 50, all without diagnosed personality disorders. Most were highly successful professional people who, quite uniformly, reported improved interpersonal relations as a result of their "transcendental experience". Using questionnaires, interviews and follow-up studies, Blum and his multidisciplinary associates sought answers about the psychological, sociological, cultural and subcultural characteristics of people who accept LSD. Under what circumstances do they use it and what effects do they report? What social and personal factors prompt some persons to take LSD and others to reject it?

Using the same techniques, a comparable sample of non-users was queried, as to why they abstained and what their attitudes toward LSD users were. A great gulf of non-communication appears to separate these two groups: the users contend that since the psychedelic, or "mind-manifesting" experience is unique—ineffable—its altered perception

of time, elaborately beautiful colors and kaleidoscopic-like visual effects defy verbal communication. The non-users, on the other hand, are skeptical, frequently admonishing and emphatic about the dangers of drug dependency and reduced social and mental effectiveness.

In this fascinating and unique exploration of the "drug revolution," Blum and his associates are rigorously objective and non-partisan. *UTOPIATES* goes far beyond a mere assessment of the drug's emotional and pharmacologic effects, the "ideology" of the psychedelic movement—the personality of its adherents and the methods of their recruitment—to examine in depth its meaningful relation to our religious heritage, social and cultural background, aims, personalities and the fundamental values of American life.

"It is further to be noted," Nevitt Sanford asserts, "that we have in LSD use what amounts to a social movement. Those who accept the drug have an ideology, one that accents the values of the inner life, of personal freedom, of mystical experience, and of love. The authors suggest that this ideology can be largely understood as a reaction against, or better, a withdrawal from major trends in contemporary society."

For whatever their reasons and rationalizations, author Blum cautions: "We dare not ignore them."

Enlivened by divergent and often conflicting views, *UTOPIATES'* contributors, five of whom were LSD users, nine of whom were not, come from varied backgrounds and ideologies which adds zest to their integrated approach. Leary, Alpert and Metzner candidly discuss their community in Mexico while presenting their rationale of this "engineered ecstasy". Joseph Downing, a psychiatrist who was a participant-observer there, discusses the group's expulsion from their Mexican "Eden". Together with William Wygant, a minister, he also comments on the religious uses of LSD.

Keith Killam reports on the pharmacology of the drug and raises some significant questions about life-change and responsibility as it relates to the drug user. Perhaps the most illuminating—and unsettling—chapter is Joel Fort's *Social and Legal Response to Pleasure-Giving Drugs*. In it, the contributor, director of the Center for Treatment and Education on Alcoholism, lecturer in criminology and W.H.O. consultant on narcotics addiction, presents some provocative statistics on the use and abuse of more commonplace and popular "drugs".

Blum and Jeanne Wahl, a criminologist, report brilliantly about the

views of narcotics and vice-squad officers, especially those officers with "phobias" about addicts. The police view is, however, cogently argued by Edward Comber, director of the Bureau of Criminal Information in San Francisco.

UTOPIATES: THE USE AND USERS OF LSD-25 is an informed and informative study of a flammable and highly controversial subject. The facts, ideas and opinions in its pages will enthuse some, enrage others. The authors ask searching questions and bring into sharp relief the significance of increased exotic drug use in a mass society.

The Professional Reading Program

A DIVISION OF
PROFESSIONAL AND TECHNICAL
PROGRAMS INC.

Dear Member:

Now you can learn to read with greater speed, comprehension, and enjoyment.

Did you know that you can spend as much as three hours of every working day reading routine material? These daily reports, articles, correspondence, and memoranda cut heavily into your valuable time. Yet you must read them to keep up-to-date with developments in your field. And as your responsibilities increase, so do the masses of printed matter.

Now, The Reading Laboratory, an organization with sixteen years of experience in improving and developing reading skills, offers a remarkable program that can help you read more, read better, and understand more of what you read.

THE PROFESSIONAL READING PROGRAM

The Professional Reading Program is a fully tested and integrated program of instruction, practice, and testing designed to help you read at your maximum speed and with increased comprehension. It not only corrects poor reading habits, but keeps your reading skills at peak efficiency over the years. The complete kit of the Program consists of the following materials:

- * THE PREP-PACER, an electric pacing instrument that gradually increases your reading rate from two to five times your initial reading rate without sacrificing understanding or retention. Durable, handsome, and easy-to-operate, the Prep-Pacer has the widest range of any similar instrument now available.
- * PRINCIPLES AND TECHNIQUES OF ADVANCED READING, a 180-page Manual that includes step-by-step instructions, exercises, and tests for improving your reading skills, together with reading material selected from many areas of interest.
- * THE CAL-Q-RATER, a circular slide rule that allows you to estimate your reading rate every step of the way.

The nation-wide reading programs of The Reading Laboratory have actually doubled the average reading skills of thousands of people. Now their compact, convenient Professional Reading Program is yours to use in your own home or office--and at your own pace. Ordinarily, the complete Program--Prep-Pacer, Manual, and Cal-Q-Rater, would cost \$42.00. But we are offering it to members for a limited time for only \$29.95 -- a savings of 30%!

Whatever your position, whatever your field or discipline, you must cope with the heavy burden of essential reading material that comes your way. We suggest that you examine this brochure to learn how The Professional Reading Program can help you ease this burden by bringing your reading skills to their maximum effectiveness.

Sincerely yours,

For The Professional Reading Program

An integrated reading program for professionals prepared by the organization that has successfully *doubled* the average reading skills of 15,000 people...

THE PROFESSIONAL READING PROGRAM is a remarkably effective and convenient way to strengthen reading skills.

Here's what this Program will mean to *you* and your family:

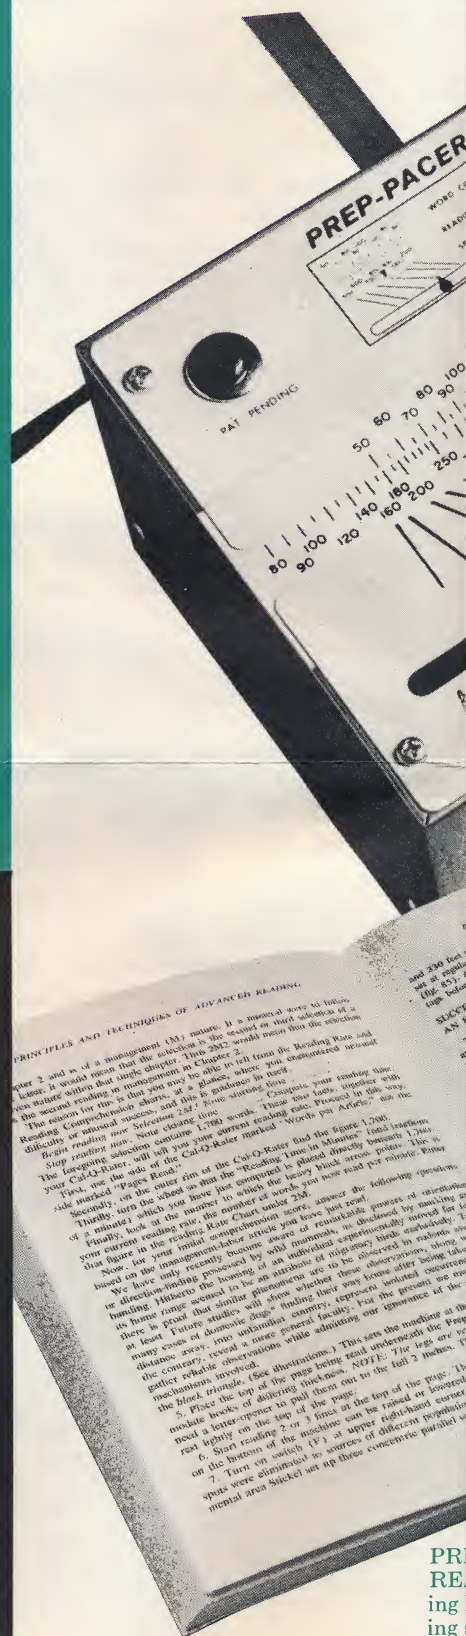

Executives will clear their desks of the huge volume of routine but time-consuming material, quickly and efficiently. They will have more time to concentrate on important policy decisions and on major company-wide projects.

Professionals will better absorb the seemingly endless flow of information in their respective fields. And what is more, this information will be clearer, more readily retained, and therefore more useful. Teachers, in particular, will find the PROGRAM extremely helpful in mastering the increasingly large number of books and articles on education and on pedagogical techniques.

College and high school students will be more capable of handling the staggering amount of reading material they confront every academic year. They will be able to cope with lengthy reading assignments, perform to full capacity on timed tests requiring reading, and read more non-required books. The result: expanded knowledge and better grades.

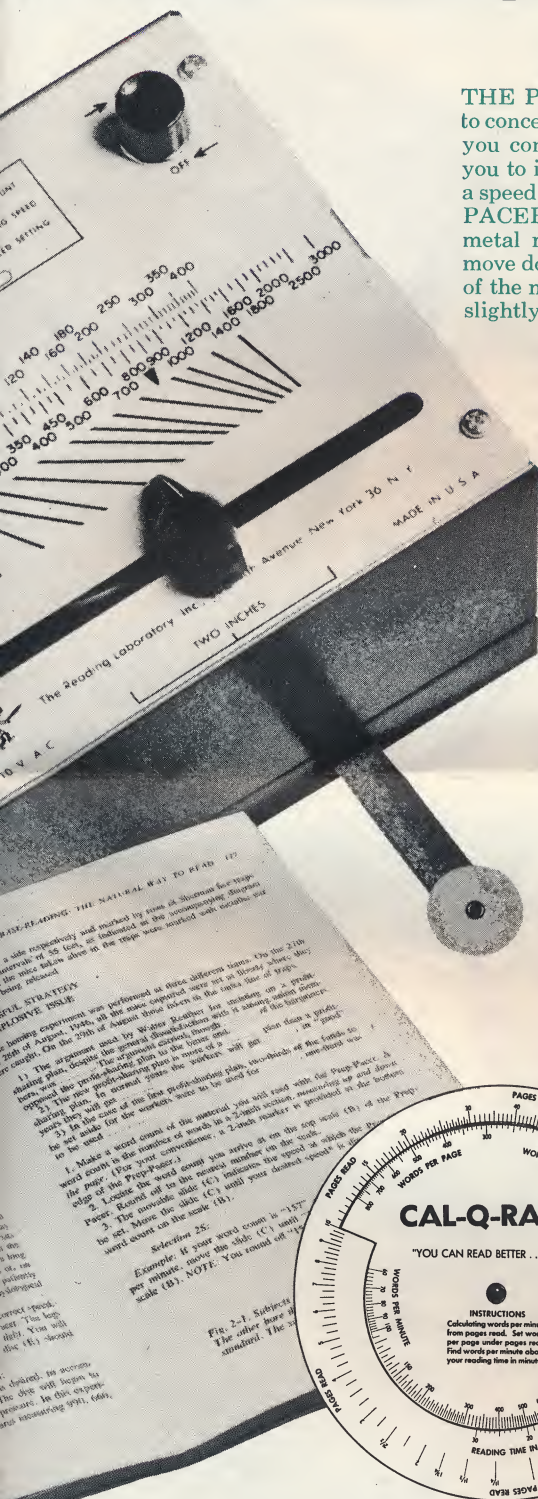

We believe you will find that THE PROFESSIONAL READING PROGRAM is one of the most practical, most *genuinely useful* investments you will make this year.

These are the com
designed

vari

Components of THE PROFESSIONAL READING PROGRAM: to develop—and improve—your reading skills...

THE PREP-PACER is an electric instrument that helps you to concentrate on steadily increasing your rate of speed. It makes you conscious of your current reading rate — and then allows you to increase it a little at a time. You set the timing device to a speed somewhat above your current speed, position the PREP-PACER above the reading material, and open the switch. A metal ribbon—on the end of which is a small disk—begins to move down the printed page. It is your task to read 2 lines ahead of the moving disk. If you fall behind, you reset the timer for a slightly lower speed.

* LONG-LIFE DURABILITY

Rugged construction gives The Prep-Pacer many years of continual use in school, office, or home.

* EASY TO USE

The simplified, finger-tip speed calculator and instructions are printed on a durable metal face.

* SILENT, ACCURATE ELECTRIC MOTOR

The heavy-duty electric-clock type motor is sealed in oil to insure lifetime accuracy.

* COMPACT PORTABILITY

The Prep-Pacer is brief-case portable. It occupies little more space than a quart carton and is easy to handle, carry, and store.

* LASTING BEAUTY

The aluminum case has a green crystal finish which harmonizes with any room color scheme.

* NATURAL READING POSITION

Any type of reading material — textbooks, magazines, pamphlets, or individual sheets — can be placed in a natural table-top reading position on a desk or table.

THE CAL-Q-RATER is a disk that operates on the same principle as a slide rule. The two outer layers rotate upon the larger inner layer and are marked to give you your reading time in minutes or your speed in words per minute. Like the slide rule, the CAL-Q-RATER saves you time-consuming arithmetic.

PRINCIPLES AND TECHNIQUES OF ADVANCED READING is a Manual explaining how The Professional Reading Program works, including many exercises to increase reading speed, comprehension, retention, and critical thinking, plus initial, mid-point, and final tests. The Manual also contains a variety of contemporary selections from many fields of interest.

See back page for information on how you can obtain your Program kit at a savings of 30%!

About

THE READING LABORATORY

Founded in 1949, The Reading Laboratory is one of the nation's largest organizations devoted exclusively to developing and improving reading skills. Its many services include: reading laboratories in Developmental and Corrective Reading; on-campus reading programs in over 200 private schools and colleges; on-premise advanced Reading Training programs given to the personnel of leading companies, both here and abroad; and numerous publications, including *The Techniques of Reading*, *Cut Your Reading Time in Half*, and *Read Faster, Read Better for Pleasure and Profit*. The Reading Laboratory has also produced, with McGraw-Hill, an educational film on reading.

The Behavioral Science Book Service
(see other side)

- 1 Main Selection 3 Volumes on Psychoanalytic Ego Psychology** All the monographs in the series sponsored by the Journal of the American Psychoanalytic Association. Important contributions to theory and technique by Hartmann on *ego psychology and adaption*; Jacobson on *identity and growth of self image*; Arlow and Brenner on significance of Freud's *structural theory* to contemporary psychoanalytic thought and practice.
- 2 Alternate Selection Utopiates: The Use and Users of LSD-25** A provocative and candid exploration of the "drug revolution" and its implications in American society. A multidisciplinary study that is alive with data on the legal, moral, social and medical aspects of the "psychedelic experience."
- 3 Alternate Selection The Family and the Sexual Revolution** Largely controversial views on changing sexual attitudes and their effect on the family. Premarital sex, trial marriage, communal living, abortion, etc. critically examined by Bettelheim, Mead, Mace, Komarovsky and others.
- 4 Extra Selection The Atomic Age** An indispensable and constructive guide to "thinking about the unthinkable" by the scientists who created the atomic age — Szilard to Oppenheimer.
- 5 Special Selection The Professional Reading Program** An integrated program of instruction, practice and self-testing that dramatically increases reading speed, improves skills, maximizes comprehension. Complete with motorized equipment, aids and manual prepared especially for members. *Exclusive offer at unusual savings.*
